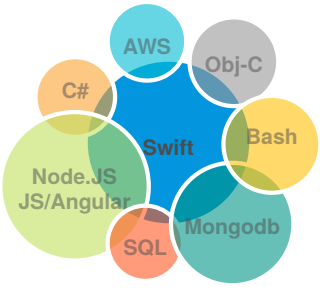
Programming



Personal Skills

Experience

08/15 - Now **iOS Software Engineer** Metaflow
A startup that measures metabolism using breathing device and a mobile app.
- Challenging ui (graphs and dashboards) on native iOS app.
- Dealing with BLE connected devices throughout the app lifecycle.
- Implementing comprehensive user flows with many UI experiments and iterations.

06/15 - Now **Co-Founder & Developer** Punchy - Smart Work Clock
A smart work clock for workplaces. Logs employees work hours automatically using the iPhone / Android locations. More than 15,000 hours logged monthly by employees.

03/14 - 06/15 **iOS Software Engineer** Aniways
A startup after seed round developing a SDK for mobile chat applications.
- Maintaining, adding features to the iOS rich UI SDK.
- Created CocoaPod from the Aniways framework, easier client integrations.
- Integration with Telegram client open source version.

11/11 - 03/14 **iOS & Web Software Engineer** Sears
Feature owner development style - from scratch to production. Working closely with the product/project teams to co-ordinate requirements and deliver to production on time.
- Native Objective-C development.
- Monthly release cycles to the Appstore.
- Most features also required some server development in C#.
- For a period I was part of the web teams working with unit test, integration test, Continues Integration, TDD. (C#, .NET, jQuery and some Java.

01/08 - 11/11 **Indi iPhone Development and Consulting** BittleBottle
- Appstore apps- ”Milim”, ”Tashthebz”, ”Dor Alon”.
- App that were developed and tested on beta users but not released:
- Picz - Social game with puzzles and pictures sending.
- Little Biz - connecting store owners with customers.
- Read N Do - reads aloud your RSS with siri like controlling using voice recognition.
- Push Scores - sends push notification on subscribed sports events - was live in the appstore for 4 month.
- Most of the apps used Ruby on Rails server and communicated with REST services using RESTKit.
